

Servidor de Buzón de Voz Visual

Soporta GSMA TS.46 para Buzón de Voz Visual

Activación en Android

Desde ADB necesitamos habilitar las claves relacionadas con VVM:

```
adb shell
su
adb shell cmd phone cc set-value vvm_destination_number_string "123"
adb shell cmd phone cc set-value vvm_ssl_enabled_bool false
adb shell cmd phone cc set-value vvm_type_string "vvm_type_omtp"
```

La configuración de tu operador de Android debería verse así:

```
vvm_cellular_data_required_bool
BOOLEAN      false
vvm_client_prefix_string
STRING       "//VVM"
vvm_destination_number_string
STRING       "123"
vvm_disabled_capabilities_string_array
STRING_ARRAY null
vvm_legacy_mode_enabled_bool
BOOLEAN      false
vvm_port_number_int
INT          0
vvm_prefetch_bool
BOOLEAN      true
vvm_ssl_enabled_bool
BOOLEAN      false
vvm_type_string
STRING       "vvm_type_omtp"
```

El logcat de Android debería incluir algo como:

```
TUI$VVM.VisualVmProtocol: startActivation requestVvmActivation
09-25 09:41:33.927 1503 1751 D RemoteVvmTaskManager:

09-25 09:41:34.005 12582 12582 I OmtpVvmCarrierCfgHlpr:
isEnabledByDefault() : true

```

Luego deberías ver un SMS enviado por el teléfono al
vvm_destination_number_string:

```

***** 7. row *****
      message_id: 253
      send_time: 2023-09-25 09:28:38

```

```
    deliver_time: NULL
    expires: 2023-09-26 09:28:38
    deadletter: NULL
    source_msisdn: 19078720155
destination_msisdn: 6666123
    message_body: Activate:pv=11;ct=samsung.SM-A536E.13
```

Esto nos dice que el SM-A536E quiere activar VVM soportando la versión 1.1 del protocolo.

Ahora enviamos el mensaje de estado SMS para informar al dispositivo que está provisionado, esto coloca las credenciales en el UE para acceder, etc.

Ahora deberías comenzar a ver tráfico IMAP.
