OmniCall Packet Core is a cloud-native, microservices-based platform packet core, SDM and signaling software suite to deliver high-performance, scalable, and

reliable connectivity for modern communication networks.

[View OmniCore Docs](#)

OmniCall provides IMS (VoLTE / VoNR) and VoWiFi capabilities, including SMS and PSTN replacement, enabling seamless voice and multimedia communication over IP networks with high-quality service and reliability, and support for legacy Circuit Switched 2G/3G networks.
